

TUNNEL SLIDE

A Magnificent Fibreglass Tunnel slide, custom made specifically for a local Dunedin School.

This PLAYGEAR™ by A J Grant Tunnel slide was manufactured to suit a new playground area at a local Dunedin school and took months to design and create.

Once the gradient and the layout of the land was established, the slide was carefully designed to suit the site. It was built then assembled in the workshop creating a magnificent tunnel slide.

Our Fibreglass Tunnel Slides are designed and built with safety in mind. Constructed from resin bonded fibreglass, Playgear™ slides have galvanized fixed brackets at the top and bottom, moulded into the slide. The benefits of a fibreglass slide are its versatility, durability and considerable life expectancy because of the non-corrosive properties. Fibreglass withstands our harsh environment and is resistant to salt water and most chemicals. It has an ultra violet light inhibitor; is antistatic and has a fire retardant in the fibreglass.

The sliding chute on this slide is continuous there are no joins, bolts or screws on the part you are sliding on, the fixing brackets are molded into the underbody of the slide.
